TI Antifreeze proteins isolated from forage grasses and their use
in modulating cold tolerance in transgenic organisms and for reduced
drying times

SO PCT Int. Appl., 71 pp.

CODEN: PIXXD2

IN Demmer, Jeroen; Shenk, Michael Andrew; Hall, Claire; Fish,
Steven A.

AB The present invention provides 13 antifreeze proteins that are
encoded by polynucleotides isolated from forage grass tissues. The cDNAs
were isolated from perennial ryegrass (*Lolium perenne*) and tall fescue (*Festuca arundinacea*) tissues taken at different times of
the year, specifically in winter and spring, and from different parts of
the plants, including leaf blades, leaf base, pseudostems, roots, and
stems. The invention also provides genetic constructs, expression vectors
and host cells comprising the polynucleotides, and methods for using the
polynucleotides and genetic constructs to modulate the cold tolerance of
organisms, such as plants. Transformation of *Arabidopsis* plants with
grass antifreeze protein genes increased the freezing tolerance
of antifreeze protein-expressing plants. The antifreeze
proteins also change ice crystal size and reduce drying time of liqs. in a
SpeedVac vacuum concentrator.
